

Duraprints Photo Scanning Price List. 1/6/2026

We meet with our clients by appointment to ensure a senior technician is available to provide helpful advice. Consultations are free and without obligation.

Ph (07) 33991177 or send us an email to arrange an appointment or request more information on digitally securing your photographic collection for the future.

Prices for high-resolution scanning of photo collections are based on photo quantities* and how they are presented. Digital JPG files are supplied on a USB3 flash drive or a portable hard drive. DVDs are also available.

System 1: Prices for auto scanning of loose photo collections.

Scan 61 to 300 photos @ 68 cents each. Includes enhancement after scanning.

Scan 301 or more photos @ 59 cents each. Includes enhancement after scanning.

Notes:

*We have a minimum auto scanning project fee of \$34 for scanning up to 50 photos.

Photo size restrictions for auto scanning are from 3 inch sq (8cm sq) up to 6x8 inch (16x21cm). Photos must be flat, non-flaking with no contamination including glue.

It is recommended that photos are provided in numbered packets. The alternative is for Duraprints to remove and replace photos from plastic album pockets if required, add 22 cents per photo.

Our auto scanning system is generally suitable for newer photos, in good condition, post-1960s.

System 2: Prices for manual scanning of loose photos or photos in albums.

Scan 16 to 50 photos @ \$2.75 each.

Scan 51 to 100 photos @ \$1.90 each.

Scan 101 to 300 photos @ \$1.60 each.

Scan 301 or more photos @ \$1.40 each.

Notes:

*We have a minimum manual scanning project fee of \$45 for scanning up to 20 photos.

We do not recommend attempting to remove photos from "sticky albums" as damage can easily occur. We can manually scan these photos perfectly without removing them from albums.

For photos larger than A4 (21cm x 30cm) scanning prices are available by quotation.

Our manual system is suitable for older photos, pre-1960s, mounted photos, photos in sticky albums, curled, crazed, and larger photos.

Key benefits of our two professional scanning systems.

Our manual scanning service incorporates skilled Photoshop technicians individually orientating and enhancing each scanned image with colour, exposure, and contrast adjustments at no extra cost. This process can significantly improve the results, particularly for older photos. Auto-scanned images also receive image enhancement at no extra cost. Most suppliers charge extra for this image enhancement stage.

Both high and low-resolution JPG digital images are provided in separate folders at no extra cost.

We generally scan to enlarge every digital image at 600ppi. Small photos may be scanned at 1200ppi.

Photos are scanned and numbered in sequence as presented.

Photo packets and albums can be numbered to aid identification and assist in matching the original photos to the digital files.

USB3 flash drives are supplied in a protective presentation case with a custom-printed title of your choice.
